

COURSE	TITLE	DURATION
CXA-206-1	Citrix XenApp 6.5 Administration	40 H.

Description:

Citrix XenApp 6.5 Administration training course provides the foundation necessary for administrators to effectively centralize and manage applications in the datacenter and instantly deliver them as a service to users anywhere. Learners will receive training for installing and configuring Citrix XenApp 6.5 for Windows Server 2008 R2, Citrix Receiver and plug-ins, as well as for using administrative consoles and tools to configure resources, policies, server and farm settings, printers, virtualized applications and more

Key Skills:

Upon successful completion of this course, learners are able to:

- Identify the basic architecture and high level functionality of XenApp and farm components.
- Configure License Administration console ports and administrators, install the Citrix License Server, and import license files into the console.
- Make installation decisions appropriate for an environment, and install and configure XenApp using the Server Role Manager and Server Configuration tool.
- Add and configure worker groups, administrative accounts, and permissions, and log administrative changes.
- Install and configure Web Interface, create and customize Web Interface sites, and configure client delivery.
- Publish applications, content, and desktops for users.
- Configure applications for streaming to servers and the desktops of Windows user devices.
- Create and configure Citrix policies, applying filters and using policy modeling tools.
- Create and assign load evaluators and implement load balancing policies.
- Identify the different session optimization display settings, HDX settings, and profile management components.
- Identify self-service application technologies and install Citrix Receiver
- Explain key Citrix printing concepts and terms, and configure printing for XenApp.
- Secure application access using Access Gateway.

- Describe the monitoring tools and technologies for XenApp, and track license usage.
- Identify the purpose and key components of SmartAuditor, Single sign-on, Branch optimization, Provisioning services, Power and Capacity Management, and XenServer
